

System Design \equiv HLD.

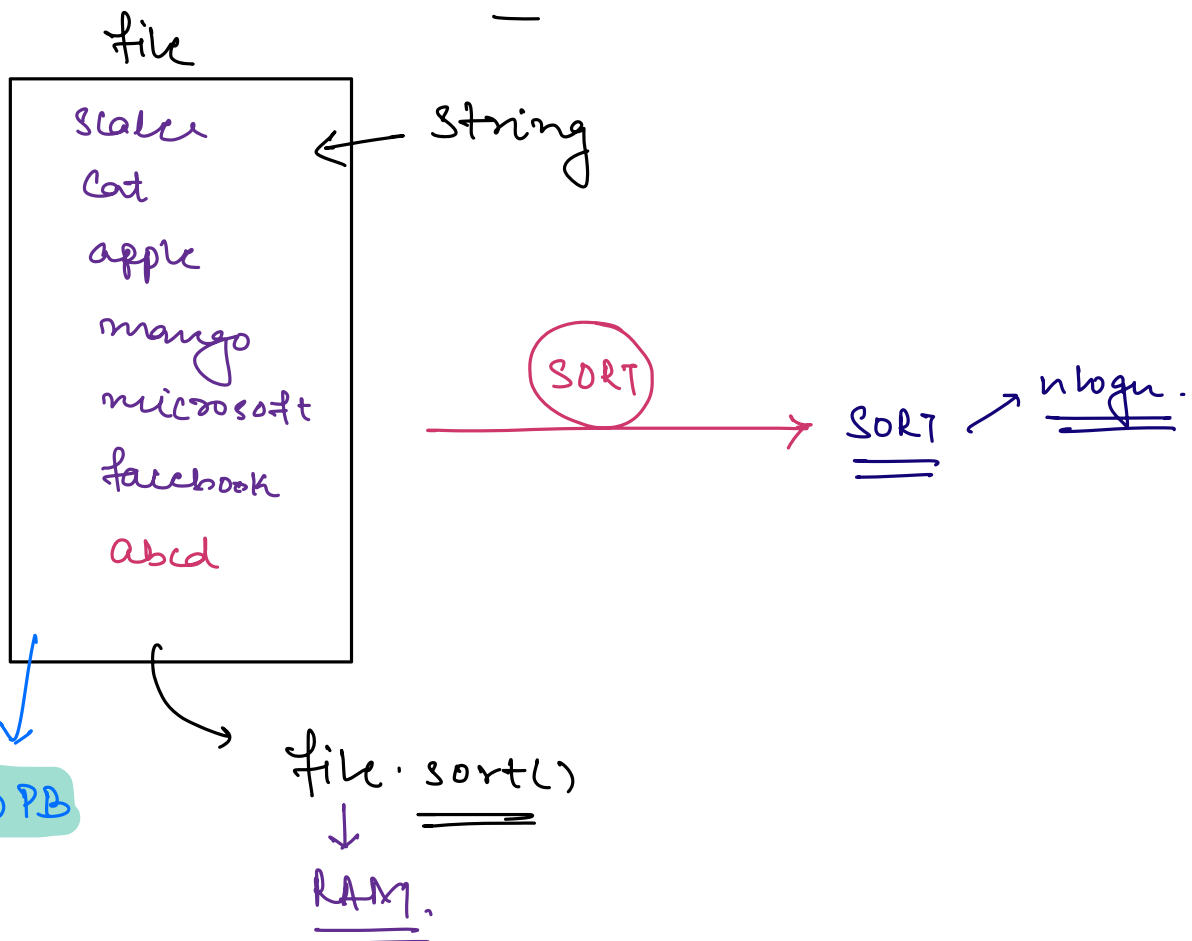

Agenda.

- Intro to System Design & CN.
- Case Study: del.icio.us
- how Internet works?

HLD.

Q.

1 PB = 1000 TB

↓

1 TB = 1000 GB

1 PB = 10^6 GB.

HLD. : Solve problems at Scale!

Case Study : del.icio.us

↓

2003

YT : 2004

Chrome : 2008

AWS : 2006.

⇒ Simple Bookmarking website.

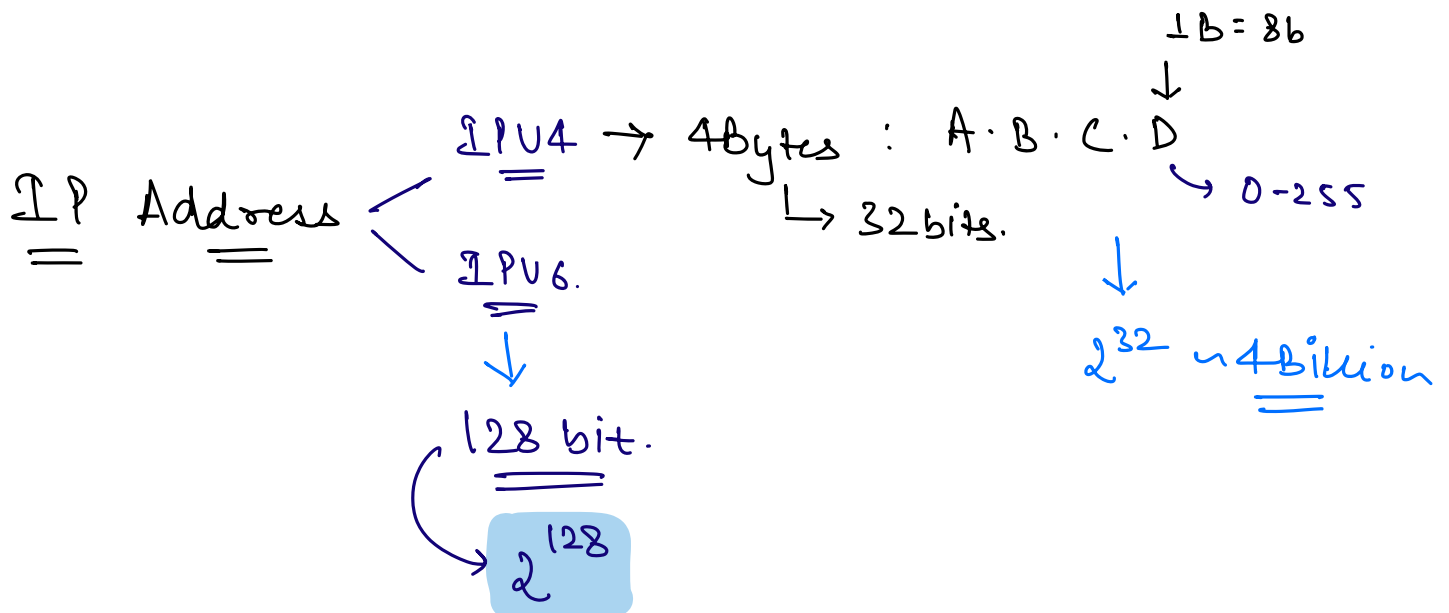

⇒ Cyber Cafe
↳ Internet Explorer.

del.icio.us

⇒ MVP.

ISP

ICANN

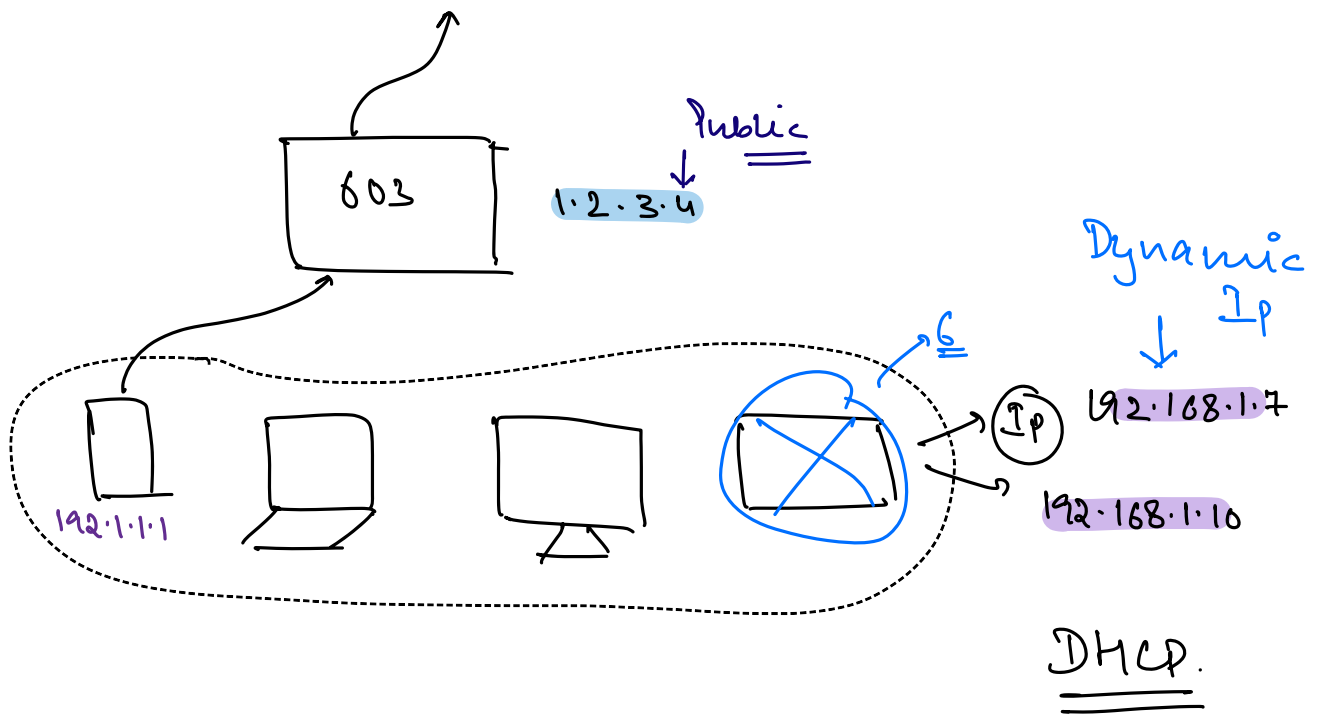

Airtel. } IM Ip's.

↓
20M

→ NAT

→ SubNet.

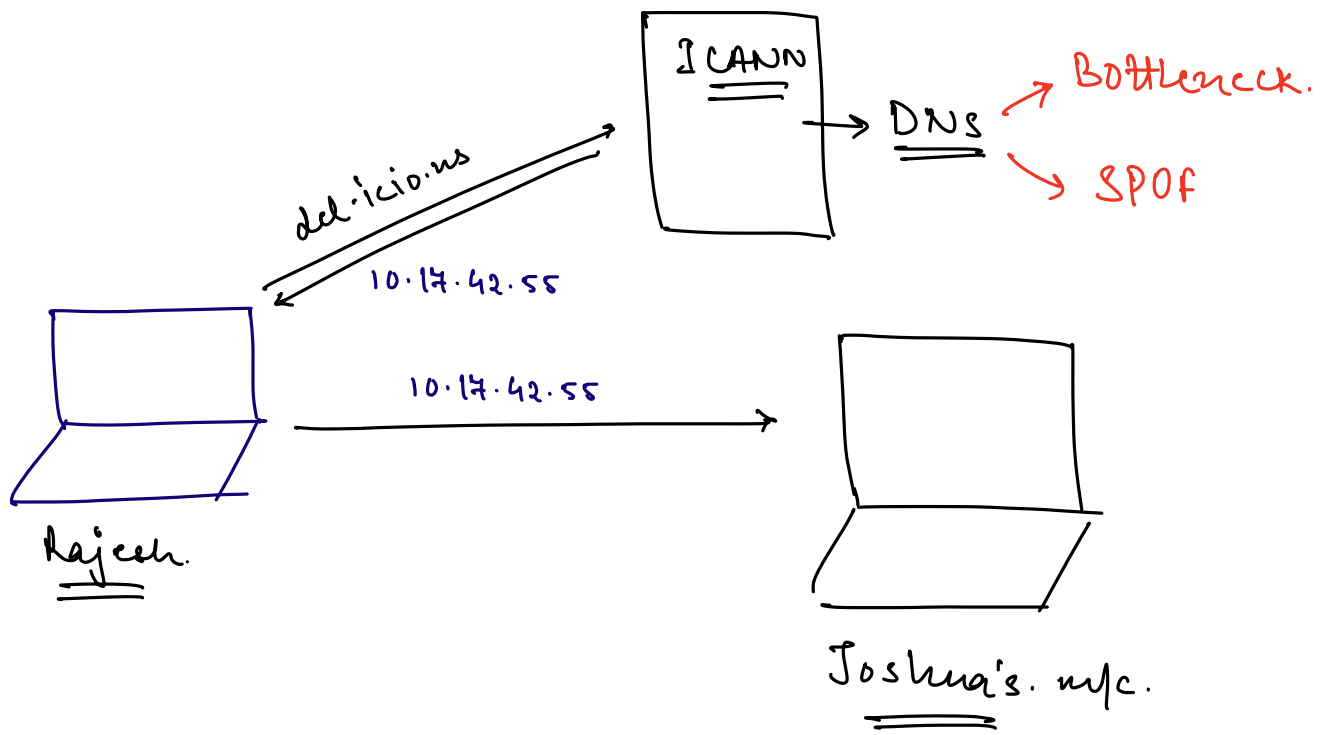

Public + Static

Joshua's.

ICANN.

↪ Domain: Ip Address.

DNS.

↳ Distributed, Decentralized & Reliable.

Scaler.com : 10.20.30.40

google.com : 1.2.3.7

Scaling Challenges.

⇒ 1M bookmarks / Day.

2003.

- 128 MB RAM
- 40GB HDD
- 2 Core CPU.

⇒ Store data

→ user-id | email | password

→ user-id | URL

4Bytes. → 1000B

→ 4B (unsigned)
→ -2B to 2B.

user-id \Rightarrow (8B)

$$1 \text{ Bookmark} = 4B + 1000B$$

$$= \approx \underline{\underline{1KB.}}$$

$$1M \text{ Bookmarks/Day} \Rightarrow 1 \times 10^6 \times 1KB$$

$$\Rightarrow \underline{\underline{1GB.}}$$

1b

$$1B = 8b$$

$$1000B = 1KB$$

$$1000KB = 1MB$$

$$1000MB = 1GB$$

$$1000GB = 1TB$$

$$1000TB = 1PB$$

\rightarrow More HDD

\rightarrow

Scale Up.

40GB HDD

128 MB RAM

2 Core CPU

80GB HDD

256 MB RAM

4 Core CPU.

160GB

512 MB

4 Core CPU.

Vertical Scaling.

→ Limitation

→ Can't be done infinitely.

→ SPOF

Horizontal Scaling

40GB HDD
128 MB RAM
2 Core CPU

40GB HDD
128 MB RAM
2 Core CPU

40GB HDD
128 MB RAM
2 Core CPU

40GB HDD
128 MB RAM
2 Core CPU

→ Can be done Infinitely.

→ No SPoF.

⇒ Lot of Challenges are there with Horizontal Scaling

1) Why IP to register at DNS.

2) Data Sync issue.

3) Load Balancing

\Rightarrow $\textcircled{47}$
